

Expand Your Business with Mobile Computer Systems

Wintec is introducing a new line of Whitebooks based on Intel® Centrino™ Mobile Technology. The new line begins with two models but we plan to rapidly expand it throughout 2004.

Wintec Whitebooks will provide your customers with breakthrough Centrino™ mobile performance, wireless LAN capability, and will enable extended battery life in a thinner, sleeker notebook design. They feature brilliant LCD displays, stunning multimedia, and USB 2.0. Enable your customers to gain a competitive advantage with outstanding mobility.

You can purchase and configure the barebone system and components to assemble yourself. Wintec can also assemble the unit for you.

Wintec Whitebooks
